jaridary 2013 DOI Odtage. I oliowap kep

Background

On January 20th, 2015 the main DOI HTTP proxy at doi.org experienced a partial, rolling global outage. The system was never completely down, but for at least part of the subsequent 48 hours, up to 50% of DOI resolution traffic was effectively broken. This was true for almost all DOI registration agencies, including CrossRef, DataCite and mEDRA.

At the time we kept people updated on what we knew via Twitter, mailing lists and our <u>technical blog at CrossTech</u>. We also promised that, once we'd done a thorough investigation, we'd report back. Well, we haven't finished investigating all implications of the outage. There are both substantial technical and governance issues to investigate. But last week we provided a preliminary report to the CrossRef board on the basic technical issues, and we thought we'd share that publicly now.

The Gory Details

First, the outage of January 20th was not caused by a software or hardware failure, but was instead due to an administrative error at the Corporation for National Research Initiatives (CNRI). The domain name "doi.org" is managed

one ID to rule them all

The Reality

persist-able

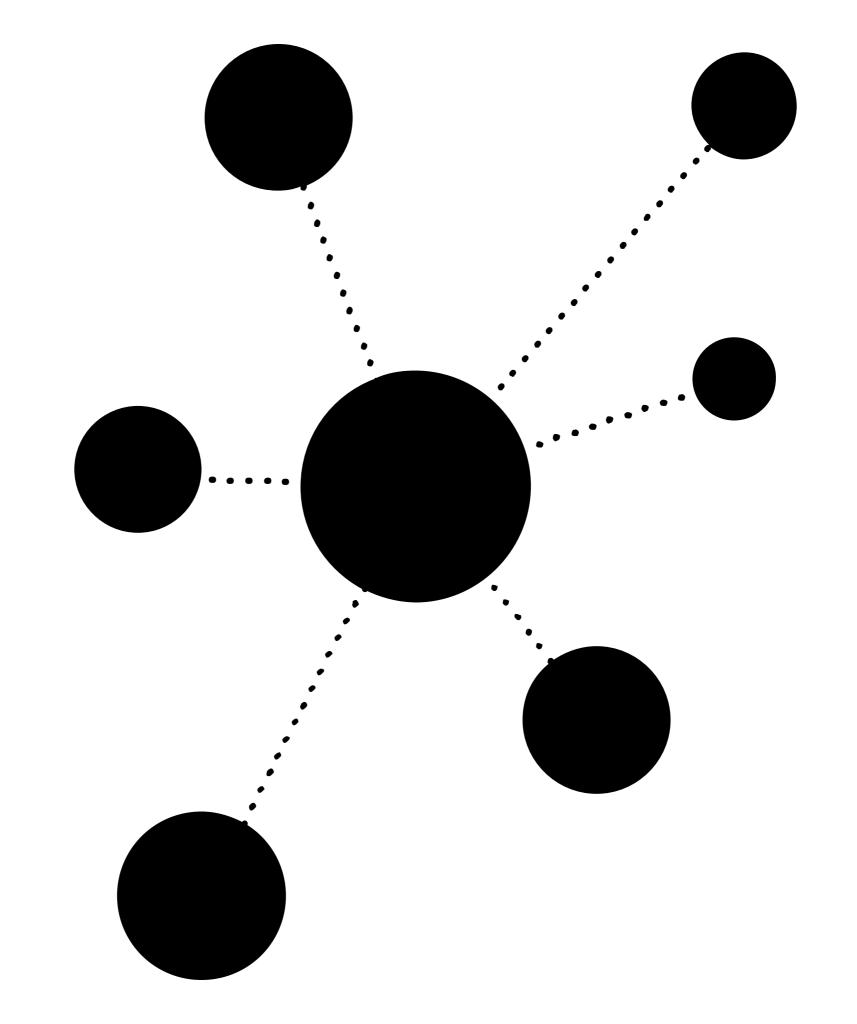

- The persistence of the identifier- that is the token or string itself.
- The persistence of the thing being pointed at by the identifier. For example, the content.
- The persistence of the mapping of the identifier to the thing being identified.
- The persistence of the resolver that allows one to follow the mapping of the identifier to the thing being identified.
- The persistence of a mechanism for updating the mapping of the identifier to the thing being identified.

Persist-able != Persistent.

Persistent!= Stable

Persistence is a social issue, not a technological issue.

Let's play a game...

months a year in the United States and 6 months in Mexico? How do Turks living in Germany construct their ethnic identities as compared to Turks living in Turkey or in Denmark? One might even question whether stable, well-defined ethnic identities or groups are anything other than "convenient fictions," or expressions of "imagined communities," to use Anderson's (1991) celebrated term. This issue takes on special urgency at a time when, as some maintain, identities in general are increasingly fragmented (Bauman, 1995; Hall, 1996). Culture and ethnicity as "shared" and "located" within a bounded population is, we argue, an increasingly outmoded notion.

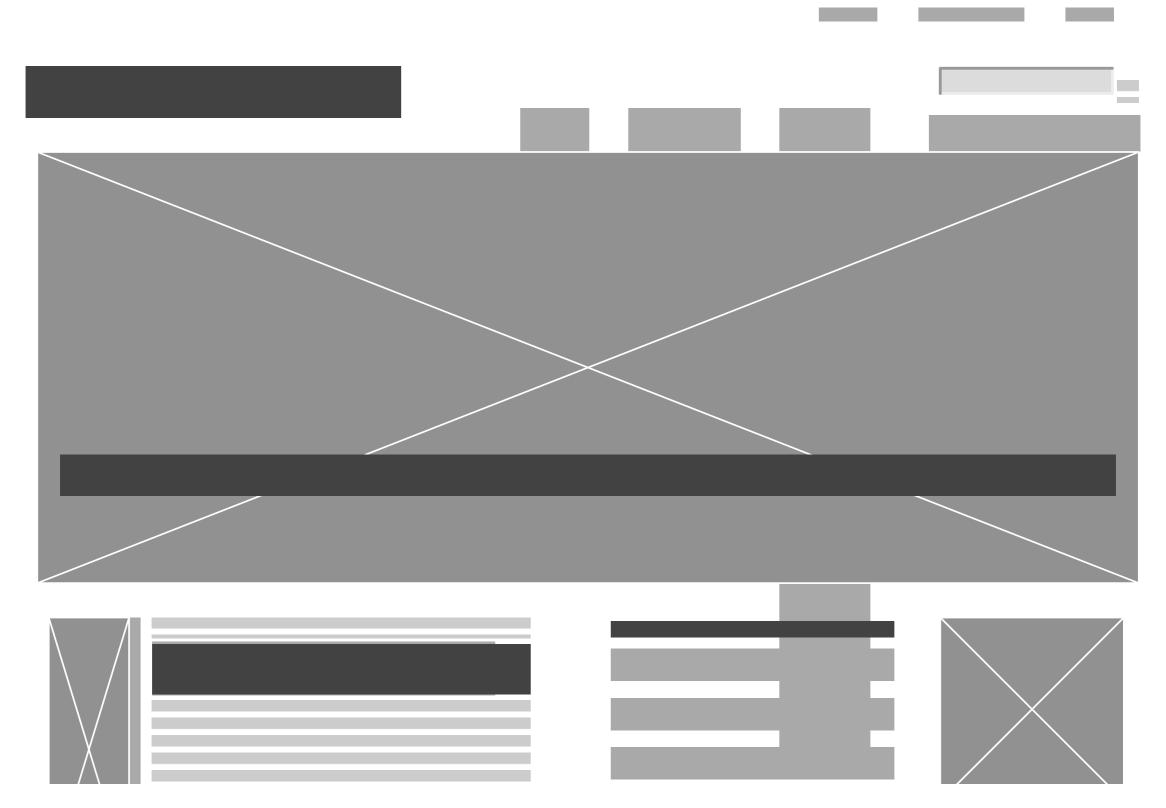

This conclusion is in line with Barth's (1989) argument that culture is "distributive" in a population, shared by some but not by others," and that the most important cultural structures "may not be embedded in its forms but in its distributions, its patterns of non-sharing" (p. 134); individuals know "quite different things and have had very different experiences" (Barth, 1993, p. 171). As Wolf (1999) noted, no person can be the bearer of a culture in its totality or reconstruct it invariably through successive generations. This view has direct consequences for our conceptualization of ethnic groups, in part because it opens up the consideration of power differentials within groups. If culture refers to aspects of reality about which people disagree, even traditional societies, however small and isolated, have been shaped by internal conflicts about important aspects of their existence. Wolf (1999) argued that there is no cultural coherence free of ideological domination;

Assuredly there are people who drive it [cultural coherence] on, as well as others who are driven ... we should try to identify the social agents who install and defend institutions and who organize [cultural] coherence, for whom and against whom. (p. 67)

Thus, we must ask, who has the right to define the values and practices of a group? For example, Wikan (in press) gives a poignant account of Pakistanis living in Norway. To define the "Pakistani culture," the Norwegian government approached the religious (male) leaders of the Pakistani community. This process, however well-meaning, produced hegemonic and conservative definitions that ignored the views of women, adolescents, and children who were not given the same "voice." Unfortunately, power issues have not received much attention in cultural psychology, even in a recent overview of the field (Shweder et al., 1998). This apparent

⁵Cultural psychology is a term used both by Shweder et al. (1998) and by Cole (1996). Our comments refer exclusively to the views of the former group.

BLOODY RIVALS: Paris massacre helps Al Qaeda outshine Islamic State

THE TERRORIST RAMPAGE at a Paris satirical magazine left the West reeling, but it is also the latest salvo in a public relations war between Al Qaeda and the Islamic State in which the prizes are funds from extremist benefactors around the globe and Muslim radical conscripts ready to kill and die on command.
