Metadata Management - the way to Open Science

Workshop, 22. Juni 2016

University of Vienna, Aula am Campus, 9:00-17:00

Fact Sheet

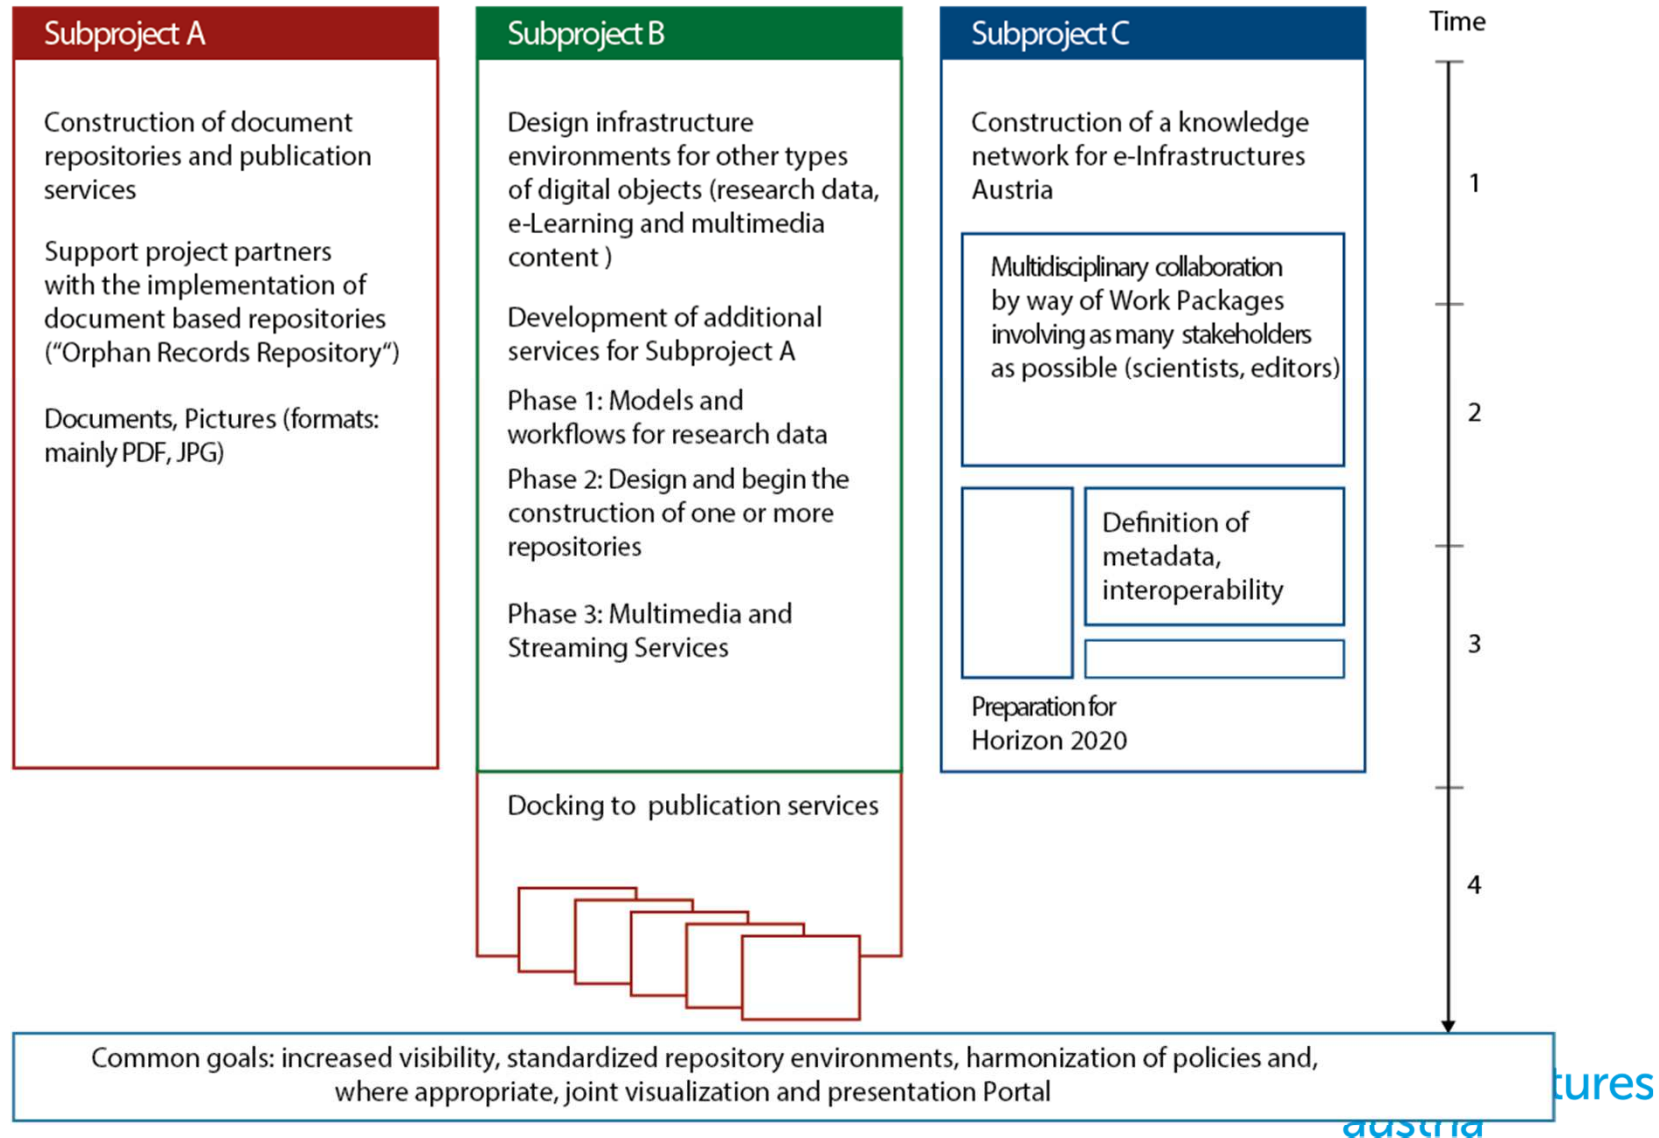

Project period: 1 January 2014 - 31 December 2016

Project coordinator: University of Vienna

Project partners: 26 Partner Institutions

Supported by: Federal Ministry of Science, Research and
Economics

Scope of the project

Cluster A	Monitoring of Document Repositories within the Partner Network
Cluster B	Planning and Implementation of a "National Survey" for Research Data
Cluster C	Designing a Knowledge Network: Development of a reference structure for the construction of Repositories
Cluster D	Infrastructure
Cluster E	Legal and Ethical Issues
Cluster F	Open Access
Cluster G	Visual Data modeling
Cluster H	Life Cycle Management
Cluster I	Metadata
Cluster J	Permanent backup of the data
Cluster K	Data from scientific and artistic-scientific research processes
Cluster L	Cross-project issues (technical and non-technical)

Cluster I - Metadata

Our objectives are two-fold, first to build of a Knowledge Network and a Knowledge Platform for metadata, second to create guidelines on how to deal with different issues regarding metadata. Cluster I focuses on creating an overview of standards (DC, MODS, METS, etc) and their advantages and disadvantages in relation to specific data sets, reviewing the subject of Linked (Open) Data and its implementation, analysing best practices, and performing a requirements analysis regarding the metadata needed by researchers. Cluster I also deals with the possibility of using Controlled Vocabularies, and with issues such as how to deal with non-standard terms and multilingual metadata. In addition, Cluster I addresses the use of data management plans.

Team Leader: Susanne Blumesberger, [Library, University of Vienna](#)

Susanne Blumesberger, Phaidra Management in the University of Vienna, also manages the CRM System of the Permanent Digital Archive [Phaidra](#) and is additionally a member of the working groups Open Access and Corporate Social Responsibility. Additional information can be found by
